

# Certified Products in the internet

04  
 10/2011

DGUV Test Internet database of tested products serves as a practical aid in the selection of safe products. Potential buyers can use it to look for any of the products which have a **valid certificate** from one of the 19 testing and certification bodies. The database provides users with information on more than 15.000 products and is updated once a month to reflect new developments. Buying tested products gives companies a good assurance that the products they get are totally safe.

DGUV Test Information

The screenshot shows the DGUV Test website interface. On the left, there are search filters for 'Name of the certificate holder', 'Product type', 'Test and Certification Body', and 'Number of certificate'. Below these are 'Start Search' and 'Reset' buttons. A 'Samples' section provides instructions on how to use search terms like 'Sage' or 'Säge' and 'certificate number'. The main content area displays search results for 'Säge' from the company 'Wilhelm Altendorf GmbH & Co KG'. It shows a table with columns for 'product/type', 'number of certificate', and 'Type of certificate'. Two products are listed: one with certificate number HO 081136 (GS type) and another with HO 081137 (BG wood dust tested type). The website footer includes contact information for 'Andreas Stihl AG & Co. KG'.

product/ type	number of certificate	Type of certificate
Formatkreissägemaschine Type(s): WA 60	HO 081136	GS
Formatkreissägemaschine Type(s): WA 60	HO 081137	BG wood dust tested

But this isn't only a useful application for companies – it also offers market-surveillance bodies and retailers a good way of checking the validity of certificates swiftly and easily.

### And this is how it works:

The database is very easy to use. The database home page can be found at <http://www.dguv.de/dguv-test/products> (⇒ „Open database“). You can then enter your search term in one of the following categories:

- product designation\* (e.g. „sensor“)
- certificate holder (manufacturer)
- product type designation or
- number of a certificate

There is an „Index of all tested products“ to help you search for a particular product.

*\* Please note that at the moment most product terms are available in German only.*

### Information provided:

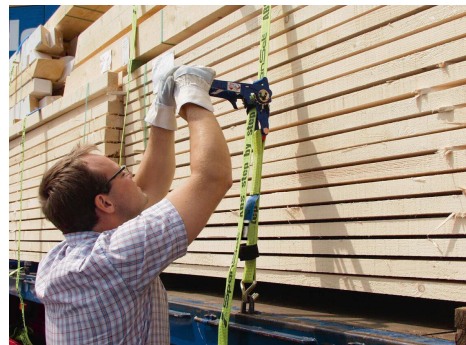

The product name and type, certificate number and certificate type (e.g. GS certificate, EC type test certificate) are provided. If the certificate includes data on the intended use and/or other comments, this information will also be provided. To see it, click on the  symbol.

Since the manufacturer's address is given for each product, you can easily contact the manufacturer to request additional information or ask where you can buy the product.

### Can't find a particular certificate or product?

The testing and certification bodies of DGUV Test have issued well over 90.000 certificates since 1965. In order to avoid a muddle of data, we only enter the currently valid test certificates in the Internet database.

If you can't find a product or a company or if you have any other questions, we'll be glad to help out. Just send us an e-mail [dguv-test@dguv.de](mailto:dguv-test@dguv.de) or give us a call.
