

## Generation of method lists

After selection of substances and substance groups the next step was to compile the lists of available methods for the different substances. For this work several basic requirements were defined, as given below.

### Origin of the methods

It was decided that methods would only be considered if published in a compilation of methods for workplace air measurements. Not to be listed are:

- Methods designed for static (area) sampling only

Workplace air methods have to be designed for personal exposure measurement. The sampling system has to be as close as possible to the breathing zone of the worker. Only methods using personal air samplers are listed.

- Methods developed for ambient air

Environmental conditions and substance concentrations in ambient air and workplace air can be very different and not comparable. For this reason, measurement conditions of workplace air measurements and ambient air measurements are different. Ambient air measurements are normally static sampling methods with a high air flow.

- Methods developed by companies without examination by an independent group

Methods given in company information are normally not evaluated according to EN 482 and refer to company related products. Products with similar performance from other companies are not listed.

The accepted sources are listed in the table. For lack of space only the abbreviations of the method publishers are given in the method lists.

**Table: Accepted sources of methods for measurement of chemical agents at workplaces**

Abbreviation	Language	Bibliography	Internet
EN	English (French/ German)	European Organization for Standardization (CEN), 36 Rue de Stassart, B-1050 Brussels, Belgium  European Standards also available from National Standards Bodies, e.g. AFNOR, AENOR, BSI, DIN, SIS etc	<a href="http://www.cenorm.be/">http://www.cenorm.be/</a>  with costs
ISO	English (French)	International Organization for Standardization (ISO), 1, Rue de Varembé, Case Postale 56, CH-1211 Geneva 20, Switzerland  International Standards also available from National Standards Bodies, e.g. AFNOR, AENOR, BSI, DIN, SIS etc	<a href="http://www.iso.org">http://www.iso.org</a>  with costs
