the authoritative, up-to-date, systematic, useful reference work

■ Concept

The *Guidelines for Occupational Medical Examinations* has, for decades, been the accepted guide to procedures of occupational medicine in Germany and abroad. The English version meets international standards.

■ Quality

A standard work on prophylaxis in occupational medical practice. Since 1971, the guidelines have been elaborated and kept up to date by the committee for occupational medicine of the German Social Accident Insurance (DGUV), occupational physicians from research and industry, specialists from other areas of medicine and experts in health and safety at the workplace.

■ Methods

All the guidelines are structured according to a universal concept and offer a reliable basis for systematic, quality-controlled occupational health care.
