

# University of Limerick, Ireland

## Self Reported Prevalence of Musculoskeletal Disorders and Exposures to Psychosocial Risks

Dr Leonard O'Sullivan and Mr. John Collins

[Leonard.osullivan@ul.ie](mailto:Leonard.osullivan@ul.ie)

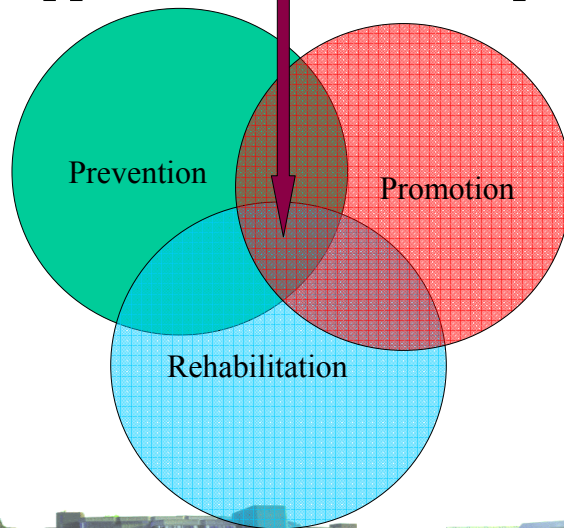

## Strategy for reducing risks

- | <u>Domain</u>             |  | <u>Expertise</u> |
|---------------------------|--|------------------|
| • Prevention              |  | Ergonomics       |
| • Promotion               |  | Health Promotion |
| • Rehabilitation/recovery |  | Occ health       |

- **Problem: insufficient interaction between domains of expertise in the workplace**

For impact: need integrated research  
& application in the workplace

## MSD Risks: Challenge for integrated research & application

- Irish Small Firms Association 2008
  - Back pain and stress most common reasons for sick leave on medical certs
- Physical Risk Factors:
  - Force, Repetition, Posture
- Psychosocial Risk Factors:
- Individual Risk Factors:
  - Age
  - Gender

# Method

- 1 Pain and Discomfort
  - Nordic Musculoskeletal Questionnaire
  - General Health Questionnaire
  - Physical Activity Questionnaire
- 2 Psychosocial risks
  - Copenhagen Psychosocial Questionnaire

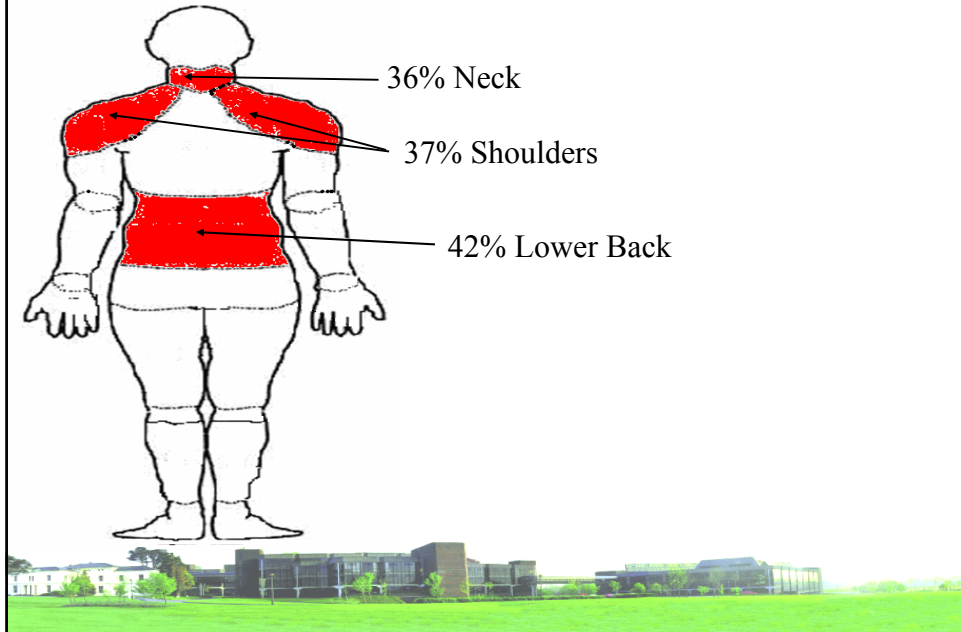

# Participants

- 200 Females and 132 Males
- 8 occupational groups

	Female	Male	Female	Male
<b>Age</b>	<b>%</b>	<b>%</b>	<b><i>n</i></b>	<b><i>n</i></b>
18-30 yrs	43%	47%	87	62
31-40 yrs	29%	27%	57	36
41-50 yrs	18%	14%	37	18
51+ yrs	10%	12%	19	16

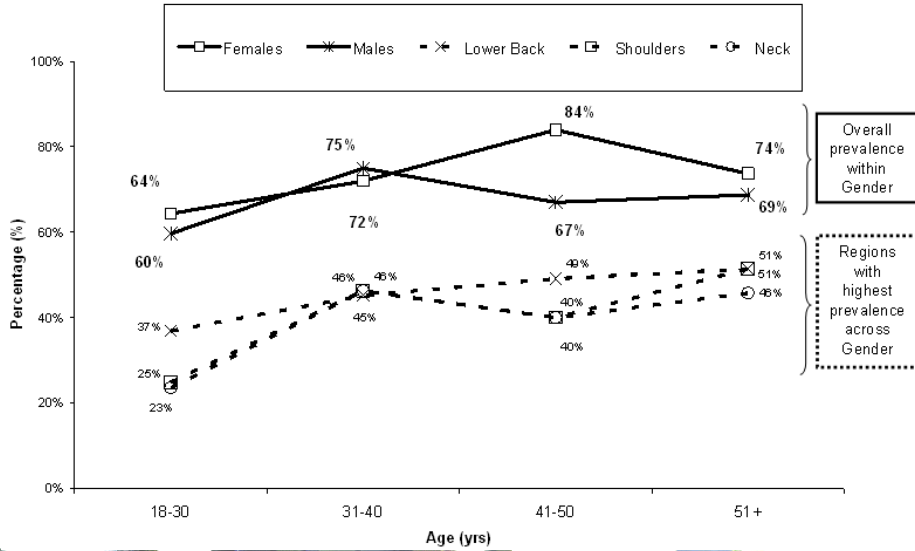

## MSD Results: highest prevalence regions

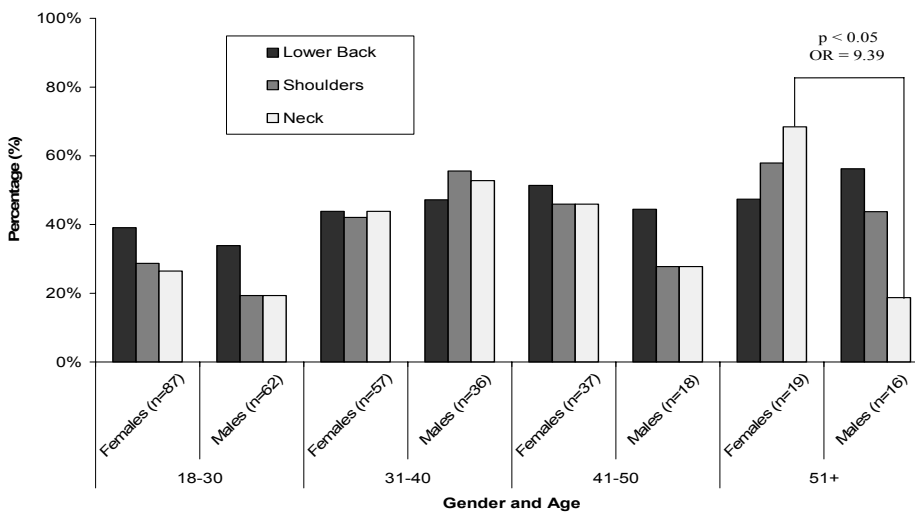

## MSDs by body region and gender

Body Area	Prevalence of disorders in last 12 months		Prevalence of disorders in last 7 days	
	% of sample		% of sample	
	<i>Females</i>	<i>Males</i>	<i>Females</i>	<i>Males</i>
Neck	39%	31%	39%	31%
Shoulders	38%	34%	38%	35%
Elbows	8%	9%	8%	9%
Wrist/Hands	18%	22%	18%	19%
Upper Back	20%	17%	20%	17%
Lower Back	43%	41%	43%	44%
Hips/Thighs/Buttocks	14%	16%	14%	17%
Knees	16%	25%	16%	28%
Ankles/Feet	13%	13%	13%	14%
Exp. one or more symptoms	71%	69%	71%	69%

# MSDs by Age and Gender

# Lower Back, Shoulders and Neck.

# EU employment and participation

# Psychosocial Results

# Psychosocial and MSD Associations

Significant associations with MSDs

- Job Demands, Job Content, Job Satisfaction and Work Environment

Strongest for

- Job Demands and Job Content

## Psychosocial risks: Age and gender differences to exposures

	Scale	Sig. <sup>a</sup>	Male				Female					
			Age	Avg.	SD	Sig. <sup>b</sup>	Sig. <sup>c</sup>	Avg.	SD	Sig. <sup>b</sup>	Sig. <sup>c</sup>

			51+	78	30				87	27		1*** 2*

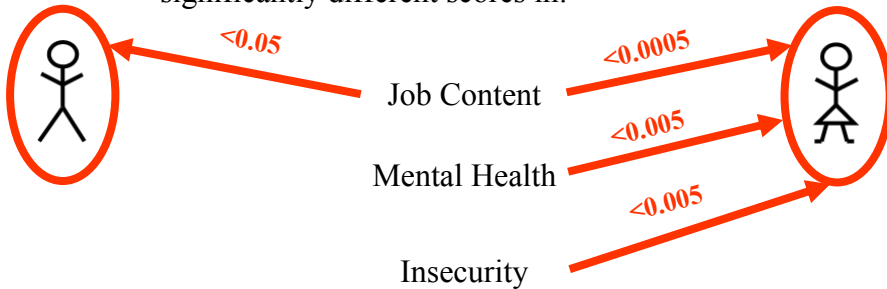

## Psychosocial risks different by age and gender

# Psychosocial Results

Youngest and Oldest participants experienced significantly different scores in:

# Conclusions

- MSD and body sites
  - lower back (F: 43%, M: 41%),
  - neck (F: 39%, M: 31%)
  - shoulders (F: 38%, M: 34%)

Inline with EU data

- Prevalence increases with age
  - Other EU data suggests decrease
  - Healthy worker effect/
  - Injured survivor – Presenteeism
    - Fewer lower risk work opportunities
  - Evaluation techniques including age?
- Psychosocial risk exposures
  - Older workers and females were exposed to more negative work related psychosocial risks
    - Interventions targeting job demands and control
    - Prevention? Evaluation methods – MSD risks
